

Goal of IndicatorTrader Strategy

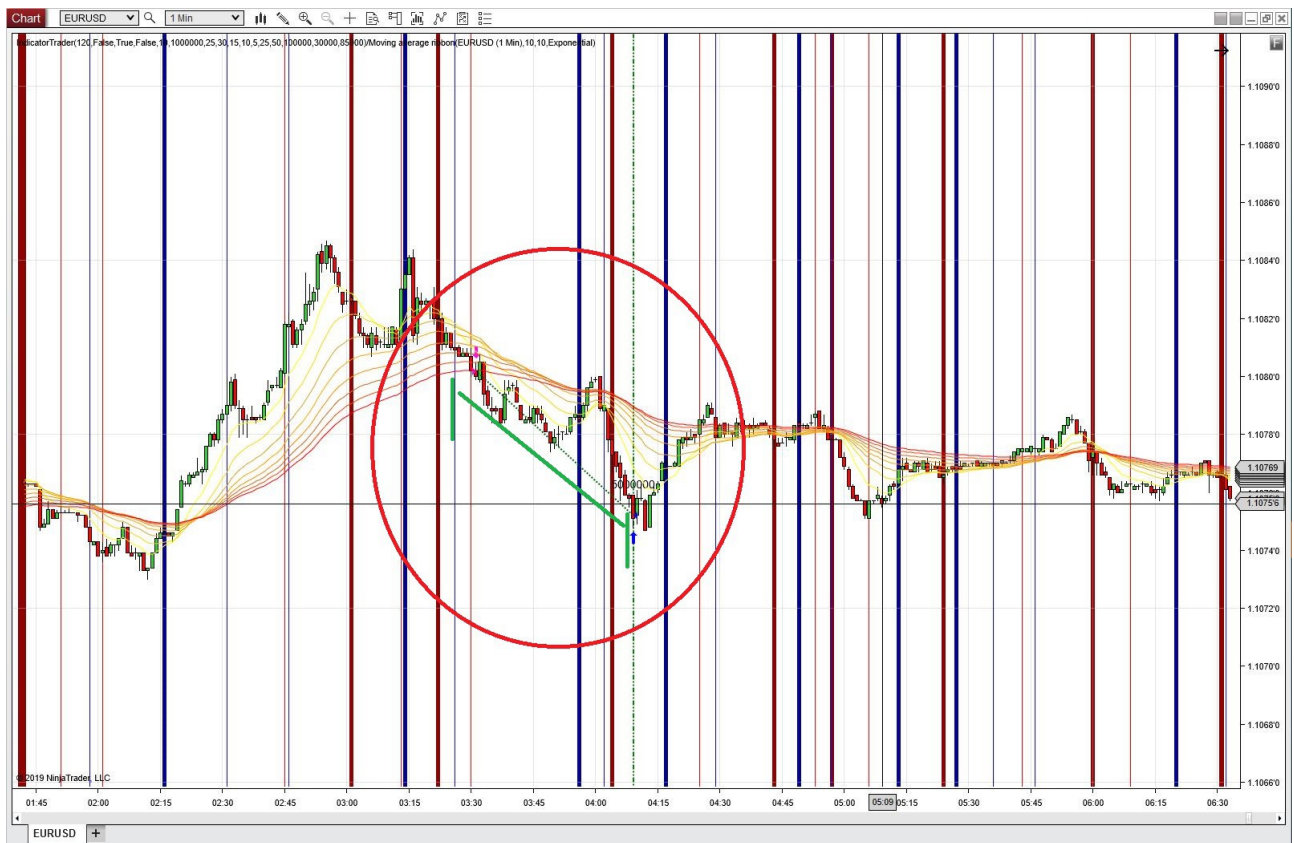

Hello i want show you based on a exemple what is the goal of IndicatorTrader Strategy.

I try to find markets that have specific trends.
Sometimes in 1h chart or 5 minute chart.

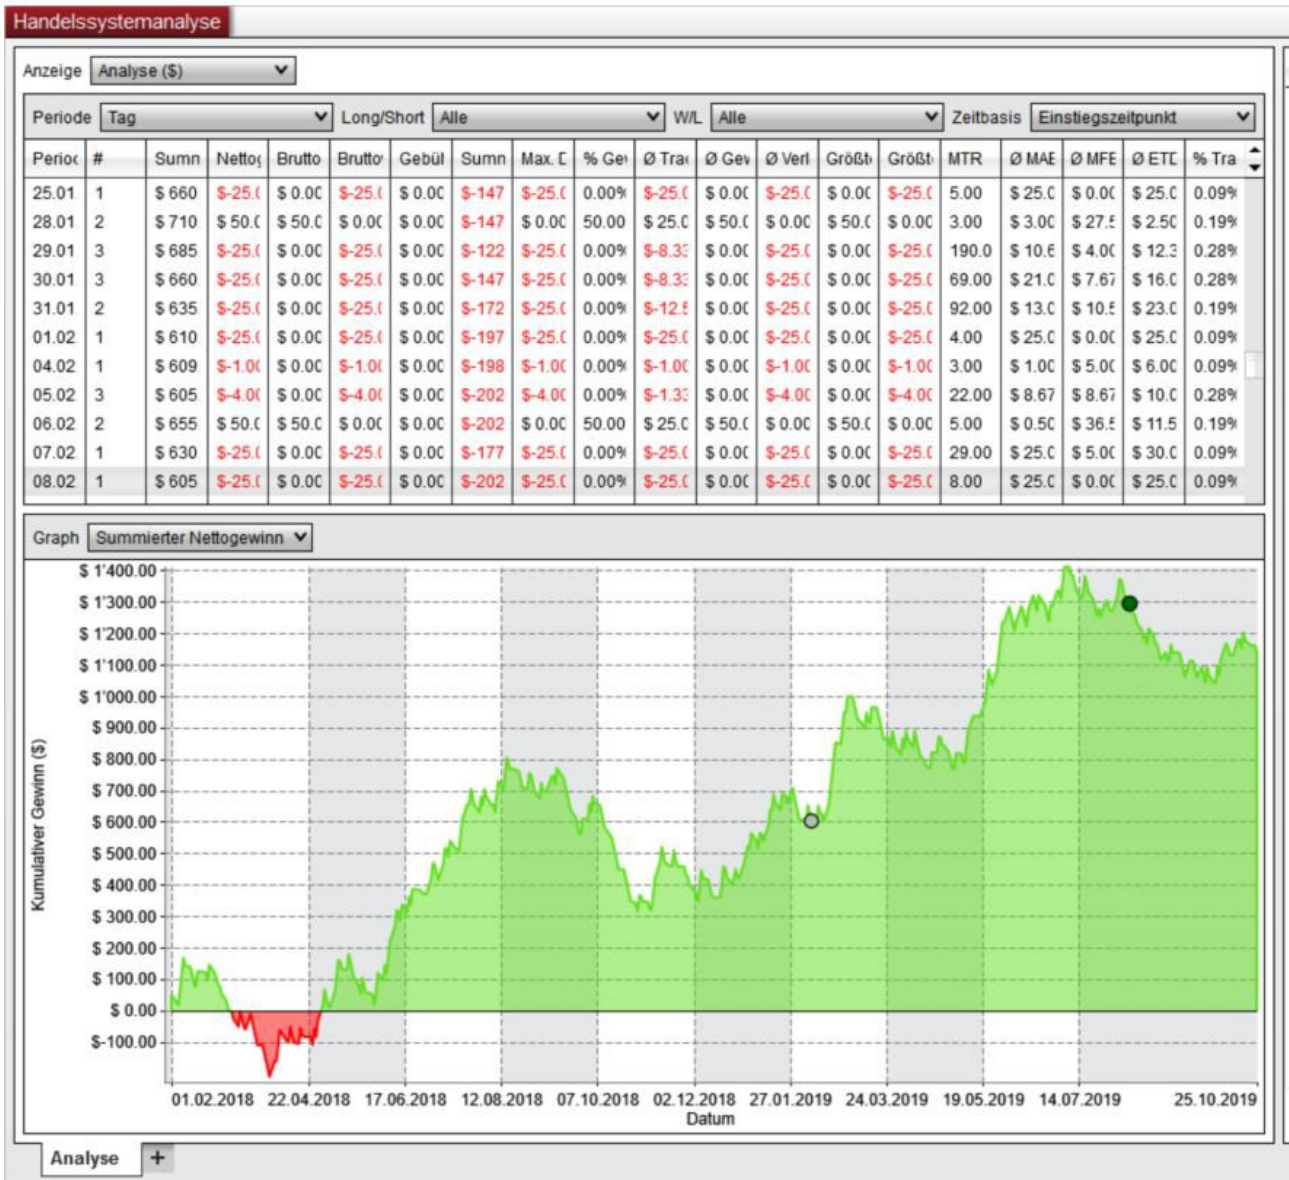

I show you an actual example.

I find a trade possibility in the 1 minute chart on EUR-USD i go short after a movement in short direction the exactly signal is present in my strategy.

In the picture we have a perfect short movement what works nice.

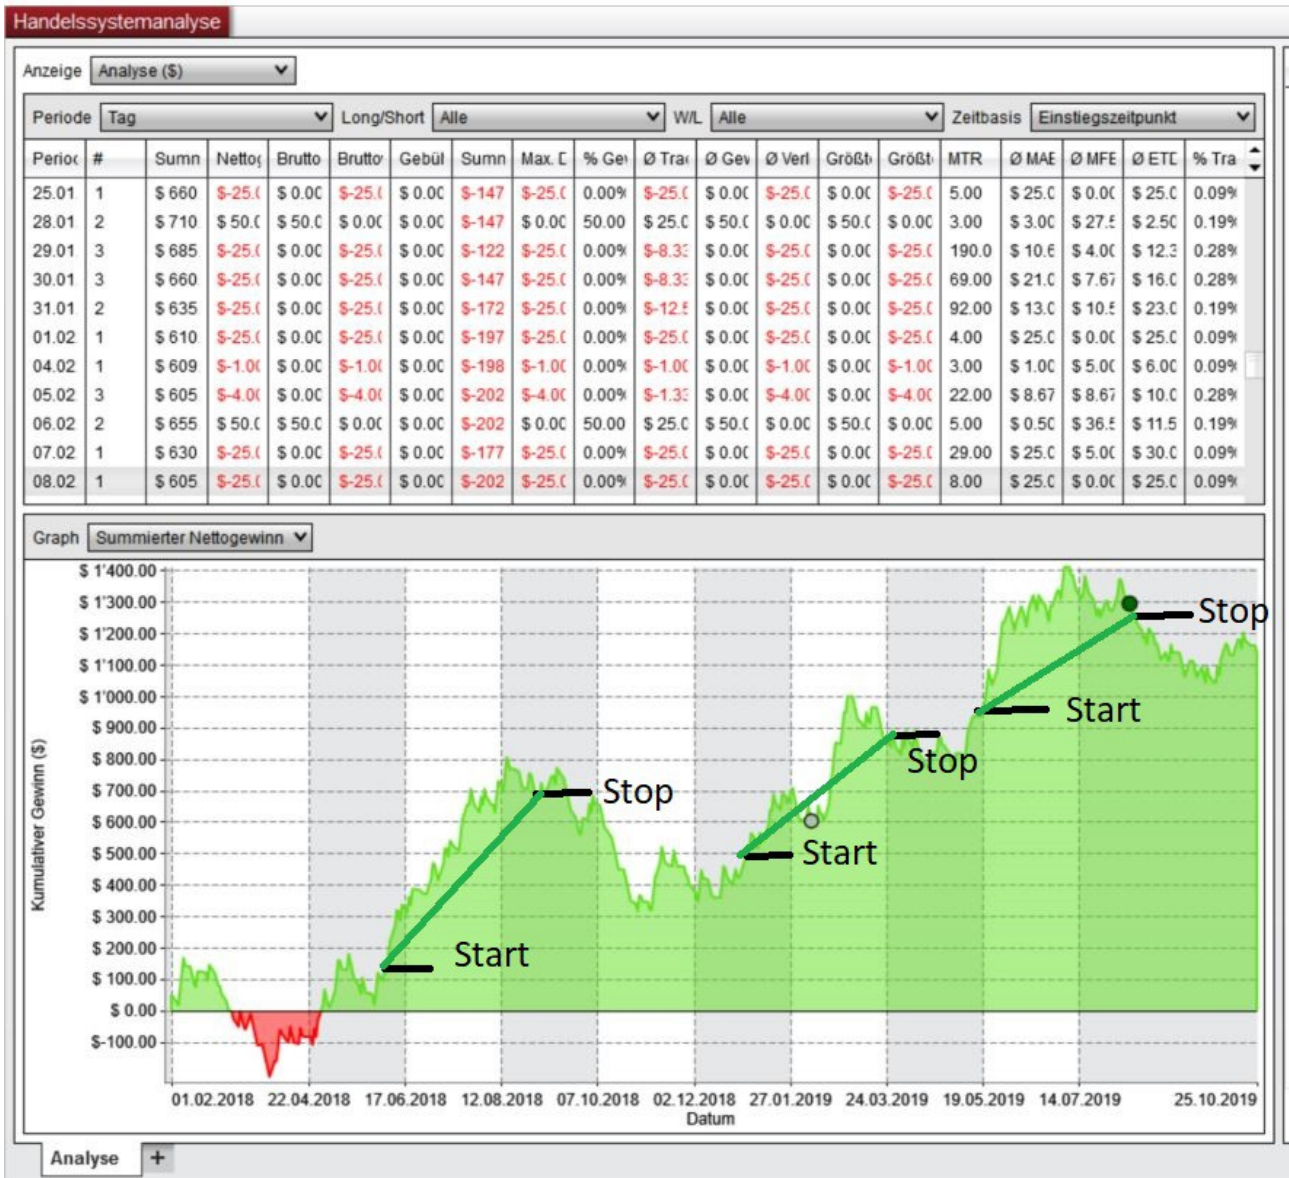

After that i want know how often this trade works in 1 month, i made a test with the strategy analyzer and i receive a result.

Here we see the action of the last months. The strategy has a nice performance. The Point is no strategy works for ever and i must update any strategy sometimes. I start the Strategy only if i have higher highs in the accumulated profit history. If the strategy works but and falls under the last down i stop trading. And wait to the next trend action.

So we have 3 trends in this timeframe what can bring profit.

I hope you can understand my intentions to work with my strategy.

Regards

Gabriel Coletta
