

# Hello

today i want show you a way how you can take profit of a not optimal working market.  
It happens often that i find a setup what not work for 100%

Here i show you a cumulative profit of a NinjaTrader test. You can see that the setup work not perfect but sometimes have rising passes.

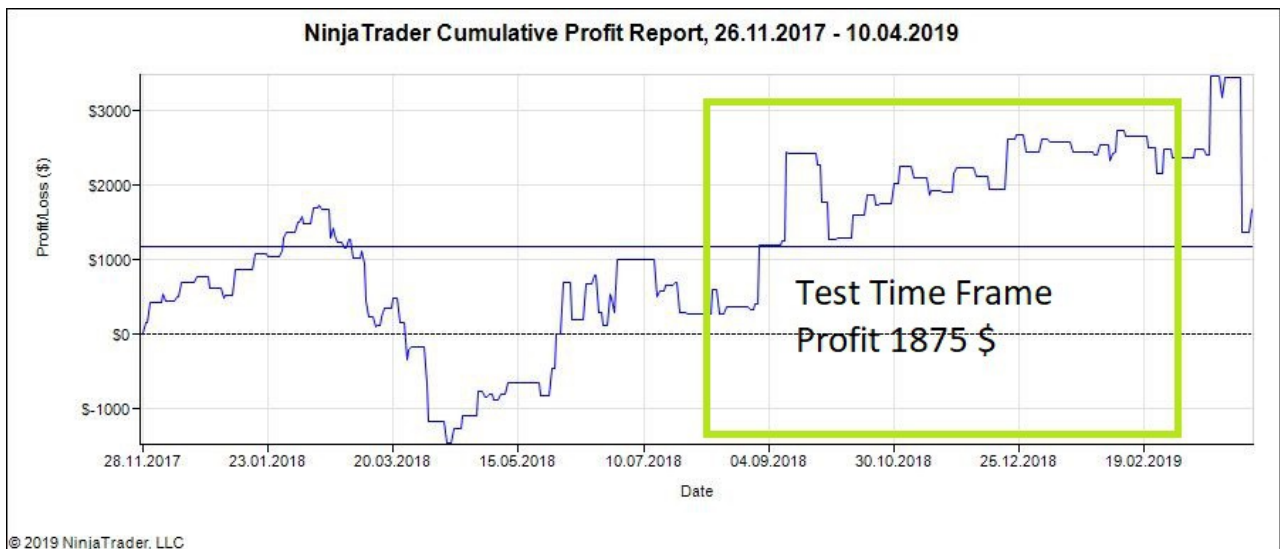

I preferate market phases what have a rising cumulative profit. So if i see a market phase like this i can start me strategy.

Here i wait in a rising market pase up to a positive trade are concluded,  
 now i start the strategy and let run the strategy so long up to a negative trade are concluded now i  
 stop the strategy and add up the tradeprofit, 1875\$ profit.

Here i add up the tradeprofit and generate a profit of 1875\$

This is the Tested timeframe profit of \$ 1875

Definitely is a question of luck if i can generate profits with this strategy, but the Opportunities risk ratios is on the top. You risc 150\$ buying an account by Topsteptrader and you can win a multiple of the commitment.

Certainly you must observe more than one market to reach the monthly account target but with this sistem is not impossible to reach the target.

I hope i can help you to reach your aims in trading and i am very pleased if i hear from you for a 2 month free trial.

Regards

Gabriel Coletta
